

Production Deployment Checklist

ExamForge AI | Generated: 2026-08-02

How to Use This Checklist

Each item must be verified before the application can be considered production-ready. Mark items as PASS, FAIL, or NOT VERIFIED. Items marked NOT VERIFIED must be explicitly tested before deployment. No item should be assumed to pass without evidence.

Security

Status	Item	Notes
FAIL	Content Security Policy configured	No CSP headers found
FAIL	Server actions have authorization checks	Missing auth checks on 5+ actions
FAIL	Auth callback validates redirect parameter	Open redirect vulnerability
FAIL	Password change verifies current password	No reauthentication
FAIL	Rate limiting on API routes	No rate limiting implemented
FAIL	Security headers on API responses	No security headers
FAIL	Webhook signature verification	No signature check in Next.js
PASS	Service role key not exposed to client	Verified: not in client code
PASS	getUser() used in middleware (not getSession)	Verified: correct implementation
PASS	Environment variables properly namespaced	Verified: NEXT_PUBLIC_ only for public
NOT VERIFIED	RLS policies enforced on Supabase	Cannot verify from codebase alone
NOT VERIFIED	JWT expiry handled gracefully	No onAuthStateChange listener

Data Integrity

Status	Item	Notes
FAIL	School admins scoped to their school	Data leakage: sees all schools
FAIL	Teachers scoped to their exams	Data leakage: sees all pending grading
FAIL	Reports filtered by school	Sessions not filtered by school
FAIL	Analytics date range filter applied	Filter computed but never used
FAIL	Teacher dashboard counts students correctly	Counts exam IDs instead
FAIL	All list queries paginated	6+ unbounded queries

Status	Item	Notes
FAIL	N+1 queries eliminated	4 N+1 patterns in reports
FAIL	Error handling on all Supabase queries	Search service has 8 silent errors
FAIL	Optimistic updates have rollback	No rollback on notifications
FAIL	Revenue calculation consistent	Dashboard and reports differ

Performance

Status	Item	Notes
FAIL	App layout uses Server Component	Entire layout is "use client"
FAIL	Analytics page uses Server Component	Client-side data fetching
FAIL	Notifications page uses Server Component for initial data	Client-side fetching
FAIL	Recharts dynamically imported	Static import (~200KB)
FAIL	Unused packages removed	14+ unused packages
FAIL	Per-route loading.tsx files	Missing for 10+ routes
FAIL	Suspense boundaries for streaming	None used
FAIL	TanStack Query used for client-side fetching	Configured but never used
FAIL	Framer Motion not in main bundle	In StatCard, used on every page
FAIL	Image optimization with next/image	Settings uses raw img tag
PASS	Font optimization with next/font	Inter with display: swap
NOT VERIFIED	Production build succeeds	Needs runtime verification

Accessibility

Status	Item	Notes
FAIL	All interactive elements keyboard-accessible	Table sort headers not accessible
FAIL	Skip-link in authenticated layout	Missing
FAIL	All form inputs have labels	Search inputs, date inputs missing labels
FAIL	ARIA labels on icon-only buttons	Billing download, View buttons
FAIL	prefers-reduced-motion respected	No support in Framer Motion components
FAIL	Color-only indicators have alternatives	Unread notification dot
FAIL	Status changes announced to screen readers	Notification actions not announced

Status	Item	Notes
FAIL	Landmark regions properly defined	Missing nav, header landmarks
PASS	HTML lang attribute set	lang="en" on root
PASS	Public layout has skip-link	Verified
PASS	Auth forms have proper ARIA	Verified: aria-label, role="alert"

Realtime & Offline

Status	Item	Notes
FAIL	No duplicate realtime subscriptions	2 subscriptions on notifications
FAIL	onAuthStateChange listener active	Not implemented
FAIL	Reconnection data reconciliation	No missed-event recovery
FAIL	Offline indicator in UI	useOffline hook never used
FAIL	Offline mutation queue	Dexie not configured
FAIL	Network recovery handler	No replay of queued mutations
FAIL	Conflict resolution for exam answers	No versioning or comparison
NOT VERIFIED	Realtime subscriptions properly cleaned up	Needs runtime testing
FAIL	Live indicator reflects actual connection status	Always shows "Live"

Code Quality

Status	Item	Notes
FAIL	No console.log/error/warn in production	34 instances found
FAIL	No duplicate logic	5x formatRelativeTime, 3x formatCurrency
FAIL	No dead code	8 unused components, 3 unused hooks, 3 unused stores
FAIL	No unused dependencies	14+ unused packages
FAIL	Middleware RBAC routes match actual routes	Prefixes do not match
PASS	No TODO/FIXME comments	None found
PASS	No mock/placeholder data	Verified: all data from Supabase
PASS	TypeScript strict mode enabled	Verified in tsconfig.json
